

Eon Odyssey

User's Guide

What's Inside

Eon Odyssey
Wall Charger

Getting Started

Activating your Tracker

If you purchased your device pre-activated, you should have received an email containing your default login information before you received the device.

If you did not purchase a pre-activated tracker, please visit activate.brickhousesecurity.com to complete your device activation.

Charge Your Device

The charging port for the EON Odyssey is located beneath the small rubber cap next to the battery indicator. Connect to a power source using the included cable for at least 5 hours.

The battery indicator will blink for several seconds to indicate it is charging, then turn off.

Power On

To power on the unit, press and hold the external power button for 2 to 3 seconds. Once the unit is powered on, both the battery light and the network indicator LED will light up.

If the unit is powered off, only the network indicator should light up. While the unit is charging, the battery light will flash and display its current charge.

Placing Your Tracker

Decide where you want to place your GPS tracker. You have two options:

Magnetic Mounting: If you're placing it on a steel surface like a cargo container, use the built-in high-power magnet. Just slap it on, and you're ready to track. Mount the device with the LED indicator facing upward towards the sky to receive a GPS signal. If you're placing it underneath a vehicle, make sure that the LED Indicator is facing downward, towards the ground, and placed as close to the edge of the asset as possible.

Secure Installation: For a more stable and secure placement, utilize the integrated strap loops. This is ideal for areas where a magnet won't work or if you prefer added security.

For the best results, ensure your Eon Odyssey has a clear view of the sky avoiding placement within enclosed spaces.

Unobstructed Sky View: The device operates most accurately when it can communicate directly with GPS satellites. Position it where there are no overhead obstructions.

Avoid Metal or Concrete: Keep in mind that the device cannot transmit or receive signals through metal or concrete. Refrain from placing it where it is enclosed by metal or concrete.

Whether rain or shine, your tracker can withstand various weather conditions. Feel free to place it outdoors without worrying about damage.

Test Driving the Device

Once installed, we recommend driving the car for 15-20 minutes to allow the device to register on the GPS network and begin reporting its location data accurately.

Test the asset tracker on a moving vehicle before installing it on a stationary item. Before installation, assess the optimal placement of the tracker for the stationary item. Ensure that the device has a clear line of sight to the sky for GPS signal reception. If you experience weak signal strength, try moving the device to a different position and checking the platform to ensure it is connected and reporting.

Product Interface

Note: This device comes with a SIM card pre-installed by BrickHouse Security. The tracker will NOT function if the SIM card is removed or replaced with a SIM from a different provider.

Your unit comes pre-programmed and should not be accessed or altered through these interfaces. Programming can only be conducted via over-the-air commands.

Device LED Description

LED Status	Color	Description
Slow flashing	RED	The device is establishing connectivity with cellular networks
Fast flashing	RED	The device is actively transmitting location data
Solid	RED	Connected to the network and ready to track.
Solid	BLUE	Display Battery Status *Press the Power button to display the battery status

The Eon Odyssey is motion-activated, it will only attempt to communicate with the platform when motion is detected, updating the tracker's position on the map. The device's LED helps you troubleshoot any issues with the tracker. When switched on, the device will power up and the light should begin flashing. Once a signal is located, the light will turn solid.

Tamper Sensor

The Eon Odyssey is equipped with a light sensor that detects when the device is removed, triggering a tamper alert instantly. When the light sensor detects light exposure, you will receive a notification of device removal. This additional security feature ensures that you are promptly notified of any unauthorized attempts to tamper with or remove the tracking device, enabling you to take swift action.

Tracking Your Device

The Eon Odyssey will send continuous location updates while your vehicle is moving. The frequency of these updates will depend on the service plan for your device and can range from every 5 seconds to every minute.

In the following pages, you will learn how to set up and customize the web interface of our Locate GPS tracking platform, as well as the mobile app, which is available in the iOS App Store and the Google Play Store. After that, you'll learn how to use some of the major platform features, like Tracks, Geofences, Notifications, and Reports.

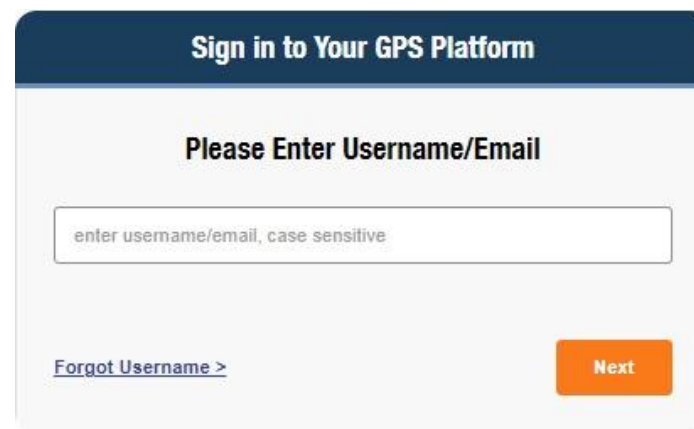

Customizing and Tracking Your Device via a Web Browser

To start tracking your Livewire Pro, open a browser window and go to www.BrickhouseSecurity.com. Hover your cursor over the Login tab on the top right of the website and click on GPS.

Using the temporary credentials provided by email, enter your email address and click the Next button. Enter your password and click Log In. You will be prompted to change your password. After you do that, the Monitoring page will appear, and your device's last reported location will be at the center of the map. You can also log in directly to the platform by visiting locate.brickhousesecurity.com.

Please Note: Both the username and password are case-sensitive.

If you have already registered in the system but forgot your password, enter your email address and click Next. On the next page, click on the **Forgot password** link. If the entered information matches the existing data in the database, instructions for setting your password will be sent to you via email.

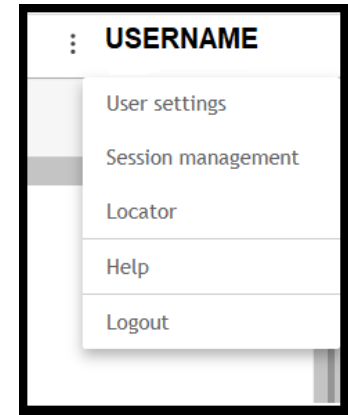

The screenshot shows a login interface with a dark blue header containing the text "Sign in to Your GPS Platform". Below the header, the main content area is light gray and contains the heading "Please Enter Username/Email". There is a text input field with the placeholder text "enter username/email, case sensitive". At the bottom left of the form, there is a blue link that says "Forgot Username >". At the bottom right, there is an orange button with the text "Next".

If you pressed **Forgot your password?** by accident, delete the received email with a password reset link and use your previous login and password. If you follow the link, you must enter a new password. You can reset the password no more than once a minute.

User Menu

At the right corner of the top panel, the username used to log in is displayed. Clicking on the username opens a menu with the items listed below.

User settings

Open user settings for viewing and/or editing.

Session management

Open the Session management window.

Shows the list of applications with access to your account and devices that can receive mobile notifications from BrickHouse. The lists are created automatically after logging in to the application.

Locator

Opens the Locator dialogue box.

Allows you to share the unit location in real time.

Help

Request help from our Tech Support team

Logout

Click here to log out of the system.

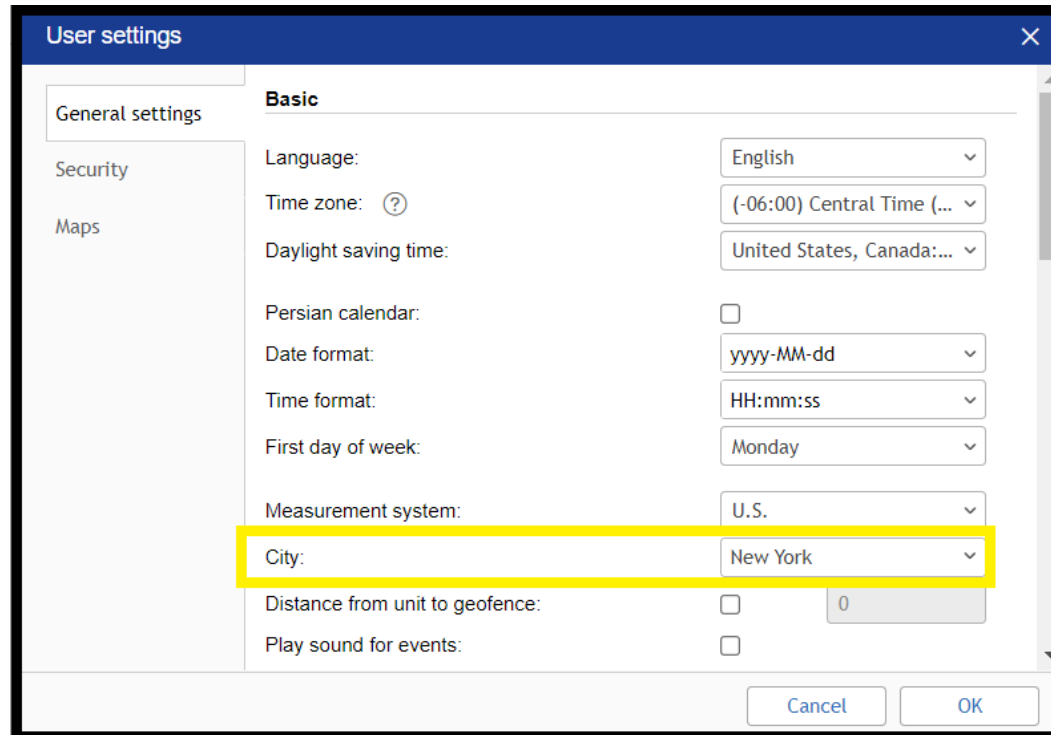

User Settings

To choose user parameters, click on the username in the right corner of the top panel and press the 'User settings' button in the dropdown menu. Next, follow the steps:

- Indicate your time zone.
- Select the type of daylight savings time used in your region.

Please select the settings properly, as they will be used when generating reports, messages, and elsewhere throughout the system.

Indicate a city in the dialogue box to scale the map for tracking entries.

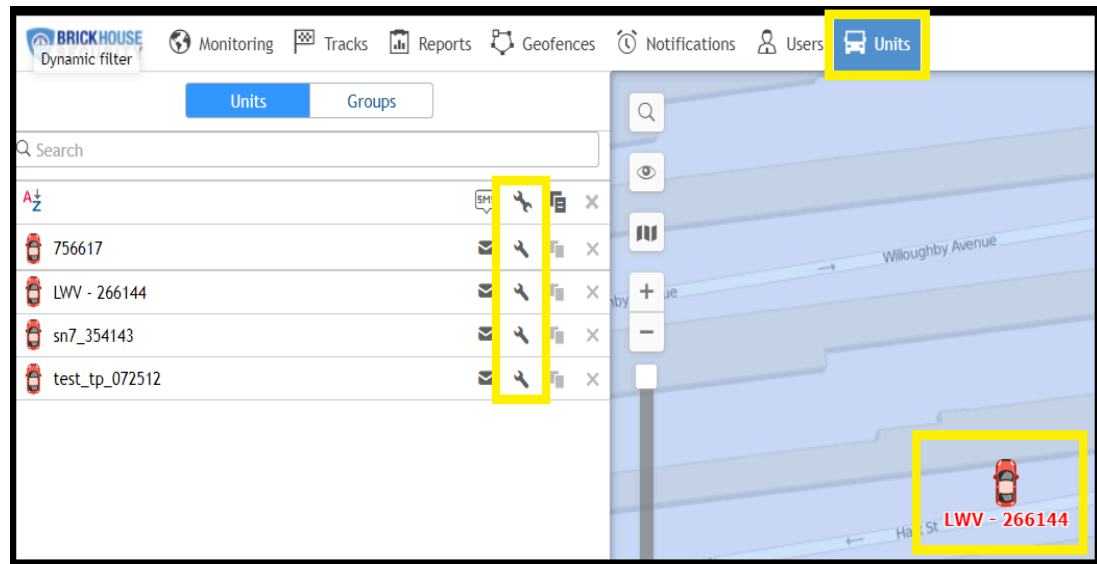

The screenshot shows the 'User settings' dialog box with the 'Basic' tab selected. The 'City' dropdown menu is highlighted in yellow and set to 'New York'. Other settings include Language: English, Time zone: (-06:00) Central Time (...), Daylight saving time: United States, Canada:..., Persian calendar: unchecked, Date format: yyyy-MM-dd, Time format: HH:mm:ss, First day of week: Monday, Measurement system: U.S., Distance from unit to geofence: unchecked, and Play sound for events: unchecked. The dialog box has 'Cancel' and 'OK' buttons at the bottom right.

Setting	Value
Language:	English
Time zone: ?	(-06:00) Central Time (...)
Daylight saving time:	United States, Canada:...
Persian calendar:	<input type="checkbox"/>
Date format:	yyyy-MM-dd
Time format:	HH:mm:ss
First day of week:	Monday
Measurement system:	U.S.
City:	New York
Distance from unit to geofence:	<input type="checkbox"/> 0
Play sound for events:	<input type="checkbox"/>

Editing Your Unit

Make sure the device is displayed on the monitoring tab before editing a unit.

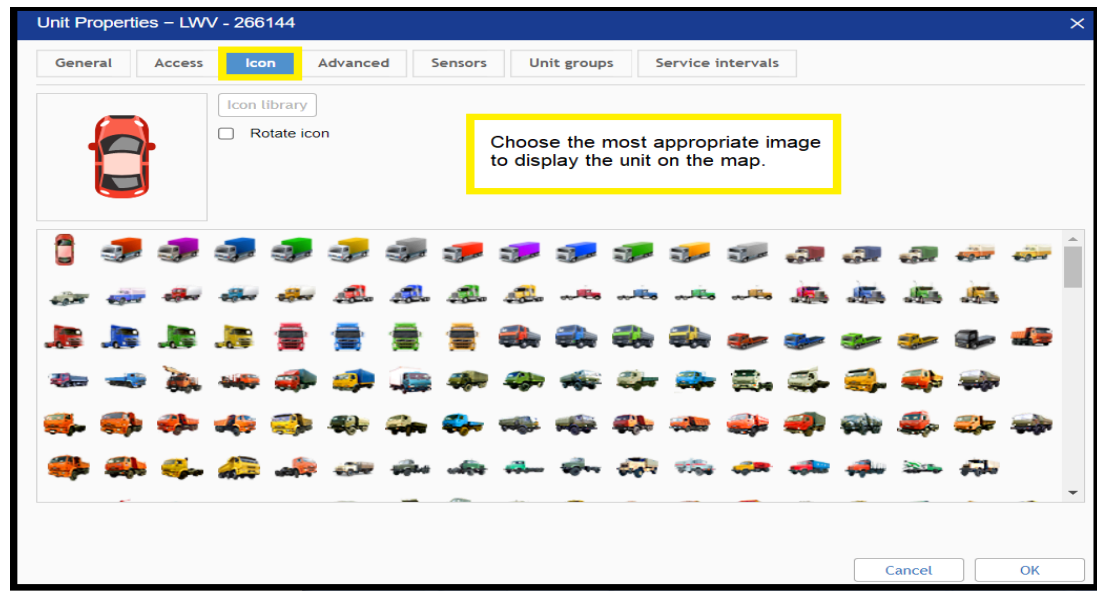

Click the wrench icon next to the unit you want to edit in the 'Units' tab of the work area.

When shown on the map, a unit is represented by an icon with a caption displaying its name.

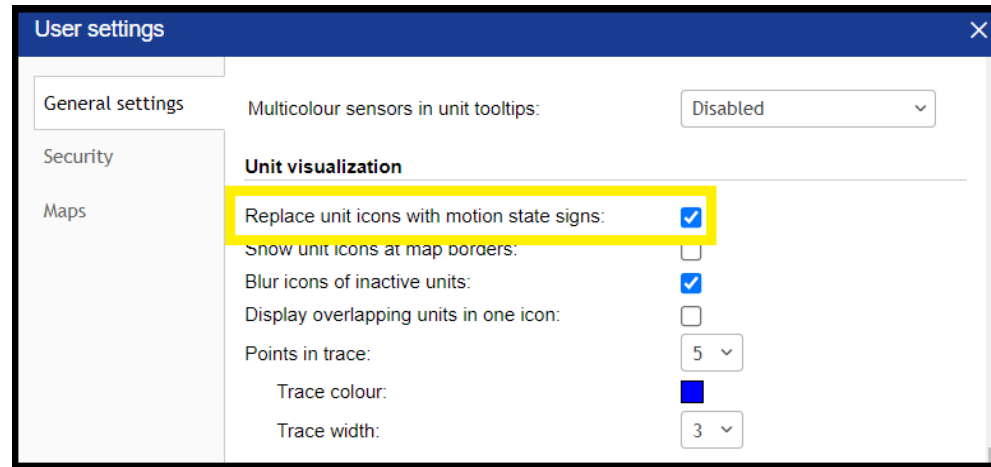

The icon is selected during the configuration process and can be chosen from a standard set of icons or uploaded from your device on the Icon tab.

The orientation of the icon can be adjusted to match the course or direction of the unit, as defined in the unit properties.

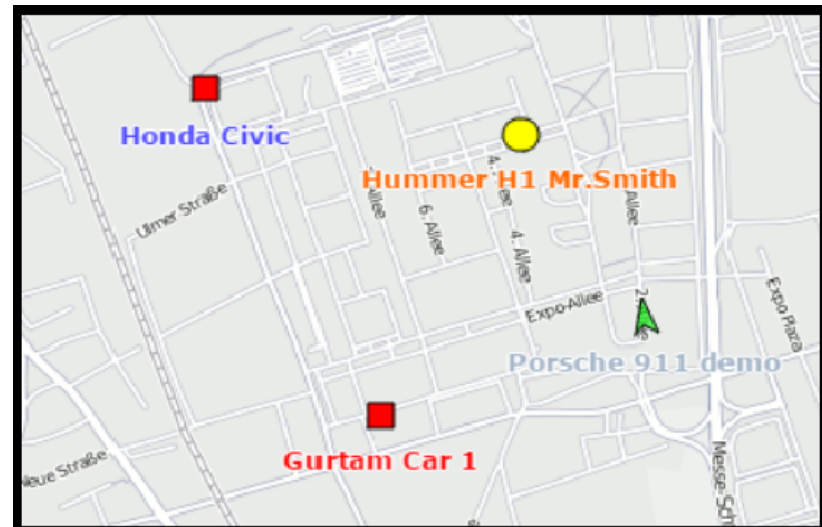

Alternatives to Icons

Unit icons can be replaced with simple motion indicators. This option is called **Replace unit icons with motion state signs** and is set in the user settings.

The following symbols are:

- Green arrow: the unit is moving, and the direction of the arrow indicates the direction of movement
- Red square: the unit is not moving
- Yellow circle: the unit is receiving power from the ignition, but not moving

Monitoring Tab

The Monitoring tab gives access to the main tracking features. Here you can watch the movement of units on the map, send commands and messages to them, monitor parameter changes online, etc.

To open the Monitoring tab, click on its heading in the top panel. The tab has a list of units that you can monitor on the map. The list can contain all units available or just some of them. You can easily add and remove units from the monitoring list, which does not lead to their removal from the system.

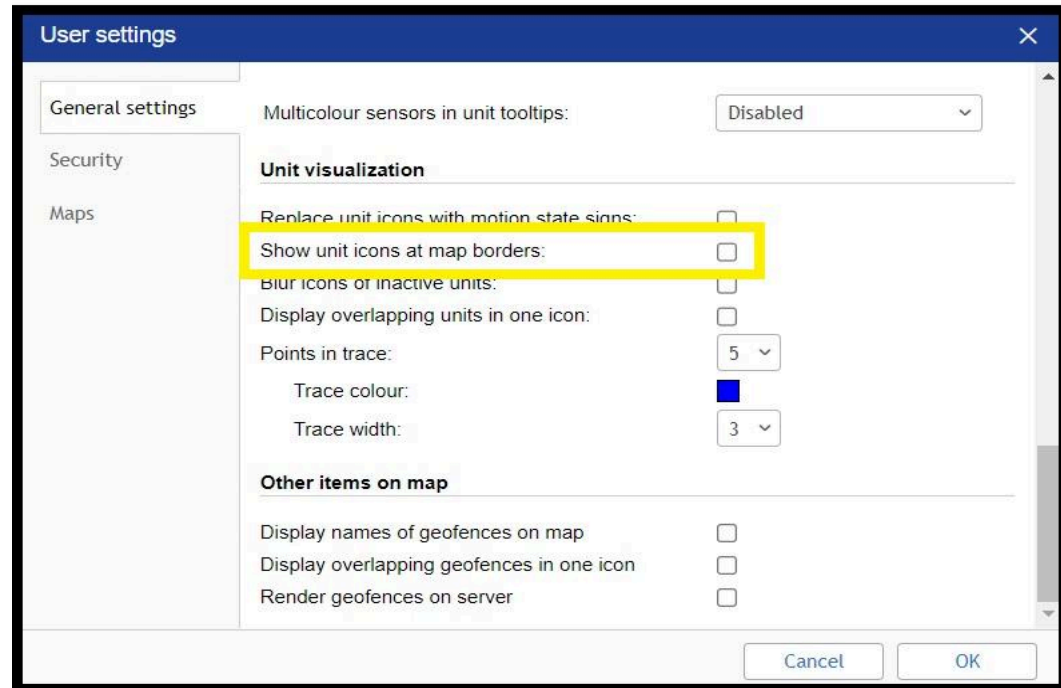

To quickly find a unit in the list, use the dynamic search bar above it. Next to the name of each unit, some icons allow you to assess the state of the unit or perform certain actions. Above them, in the header of the table, some icons allow you to order units according to various parameters. To display the icons in the work list, configure the monitoring options.

To locate a unit on the map, click on its name in the list. The map centers and zooms in on the selected unit.

The map displays only those units that are selected in the list. You can select or deselect all units at once using the checkbox in the top left corner of the list.

You will see the selected units on the map if they are in the visible area. You can move and zoom the map if needed, controlling your view the same way you would in most online mapping platforms.

If the **Show unit icons at map borders** option are activated in the user settings and the unit leaves the visible area of the map, its icon will be displayed on the edge of the map.

Click on the icon to move to the unit on the map.

To keep the location of a unit on the map, click on the **Watch unit on map** icon. When a new message is received from the unit, the map is automatically scaled so that you can see it.

Tracks Tab

A track is a line drawn on the map to show how a unit moved during the indicated period. A track is mapped using the points from where messages were reported. Each point stores the date and time when the message was received and coordinates at the point, as well as other parameters (speed, sensors, etc.).

To open the **Tracks** tab, select a corresponding name in the top panel or click on the necessary item in the main menu customizer.

The screenshot displays the Brickhouse Security interface with the **Tracks** tab selected in the top navigation bar. The configuration panel on the left includes the following elements:

- Unit:** A dropdown menu showing "756617" (highlighted with a red "1").
- Colour:** A dropdown menu showing "By trips" (highlighted with a red "2").
- Line thickness:** A dropdown menu showing "6px".
- Show annotations:** A checked checkbox.
- Apply trip detector:** A checked checkbox.
- Time Period:** A row of buttons for "Today", "Yesterday", "Week", and "Month" (highlighted with a red "3").
- Interval:** A dropdown menu set to "For previous", a numeric input field with "1", and a dropdown menu set to "days".
- Including current:** An unchecked checkbox.
- Show track:** A button at the bottom right (highlighted with a red "4").

The right side of the interface shows a map view with a street grid including Kent Avenue, Franklin Avenue, and Skilman St. A grey track line is visible on the map, corresponding to the unit and settings configured in the panel.

Mapping a Track

1. Select a **unit** in the dropdown list. Its contents depend on the list in the **Monitoring** tab and access to the units.
2. Adjust the desired **parameters** for the track (color, thickness, etc.).
3. Define the **time interval** within which you want to get the data.
4. After filling in all the fields, press **Show Track**.

Markers

To highlight important events on the track, you can enable the display of markers. The set of available markers is the same as in the reports, but some require additional sensors to be installed in a vehicle:

- fuel theft

- speeding

- fuel filling

- event (violations are identified by the marker)

- image from messages

- video from messages

- parking place

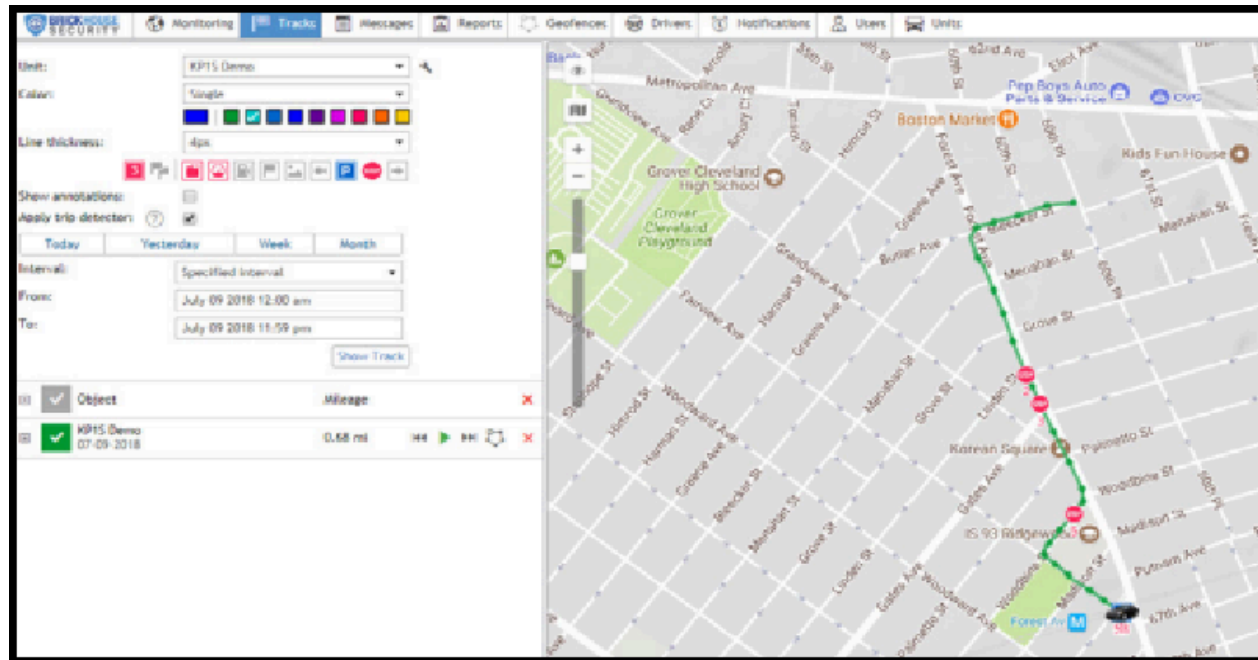

- stop

- initial and final positions (final positions are identified by the marker)

Below, we see the result of choosing a single track (one solid color), but you can also select to show a single unit with varying colors for different sensor values and speeds.

This will display the trip for the requested time period. You can now see the trip and play it back.

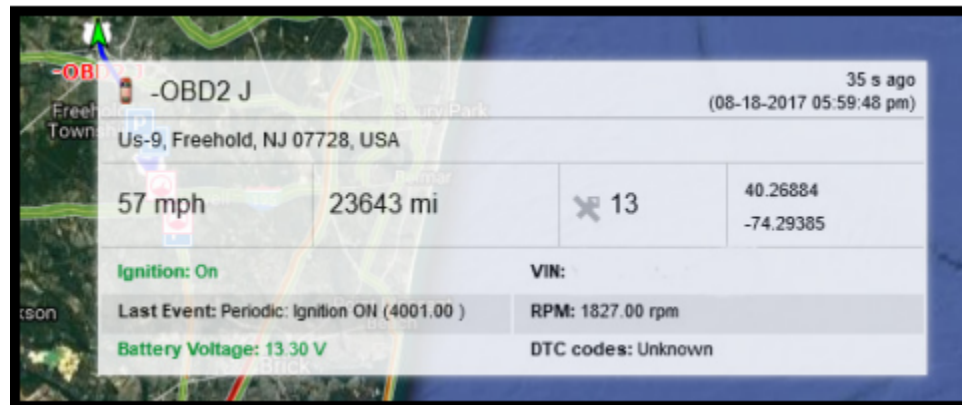

The **track player** will control the playback on the map and also includes Google Map street view images that correspond to the playback on the map.

You may also have a section for sensor values to watch during the playback.

Also, you can click on the circled icon below to see the trip as a geofence in the result line.

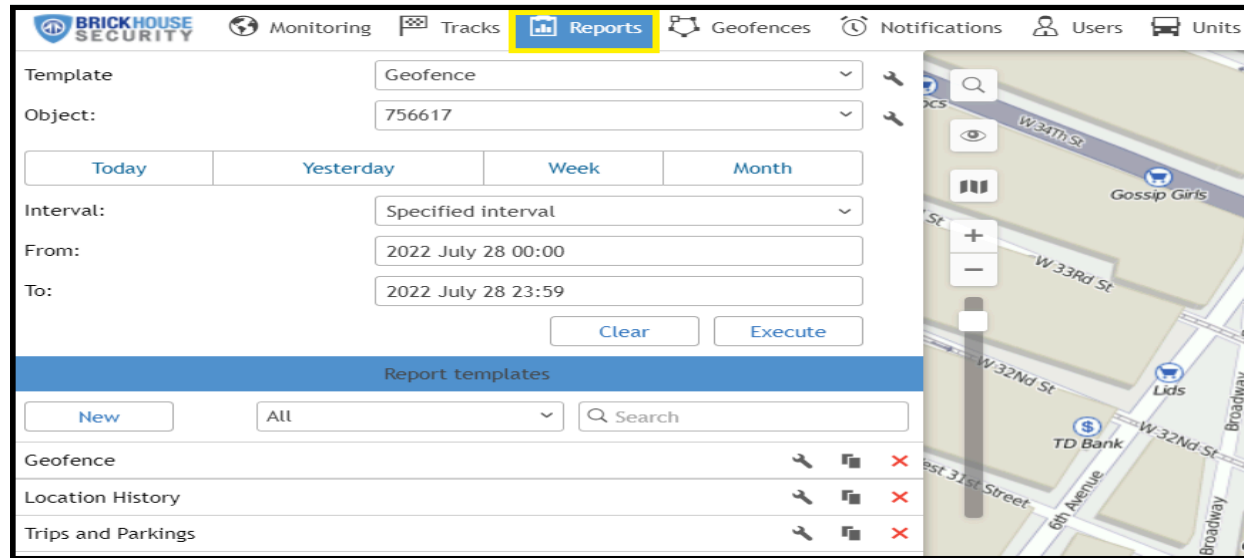

If you hover the mouse over the icon on the map on the tracking tab, the tooltip will provide you with information.

Reports Tab

To switch to the **Reports** tab, click the **Reports** header in the top panel and select the same name item in the main menu customizer.

Reports on the activity of a unit are presented in the form of tables and graphs. They can be viewed in a browser window, as well as exported to files of various formats.

We have created report templates to make finding the data you need easy. The most useful is the activity report, which includes most data available in its tables. Other report types are customized to suit your needs, so you don't have to hunt through the tables.

To obtain a report, set parameters in the work area: select report template, unit, and reported interval, then press Execute.

Geofences and Notifications

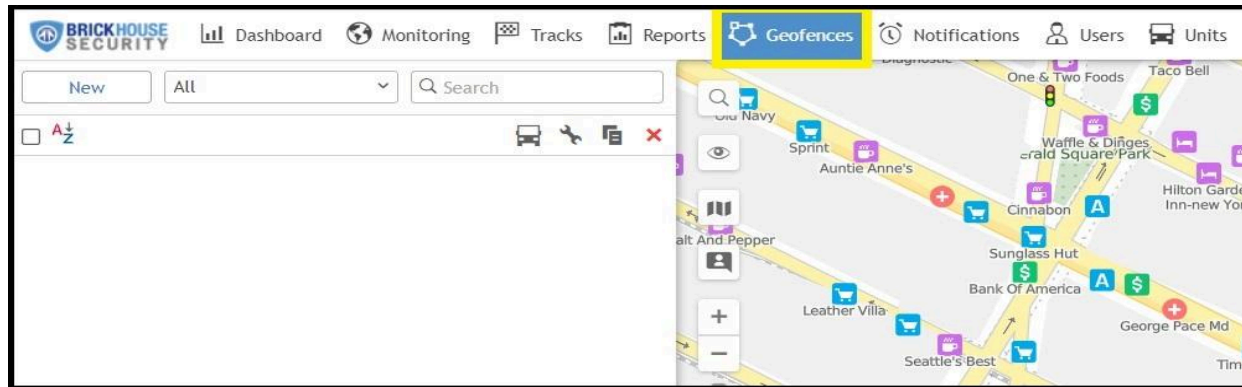

Creating a New Geofence

By setting up a geofence and creating notifications, the platform can alert you when a GPS device you are monitoring enters or exits the defined area. You can be notified via text or email if it crosses into or out of the zone.

Geofences can report units' activity in these areas or, on the contrary, outside them. You can choose an image for a geofence or add a description. A geofence can have the shape of a line (for example, following an avenue or any road), a polygon (a city park or neighborhood), or a circle with any radius.

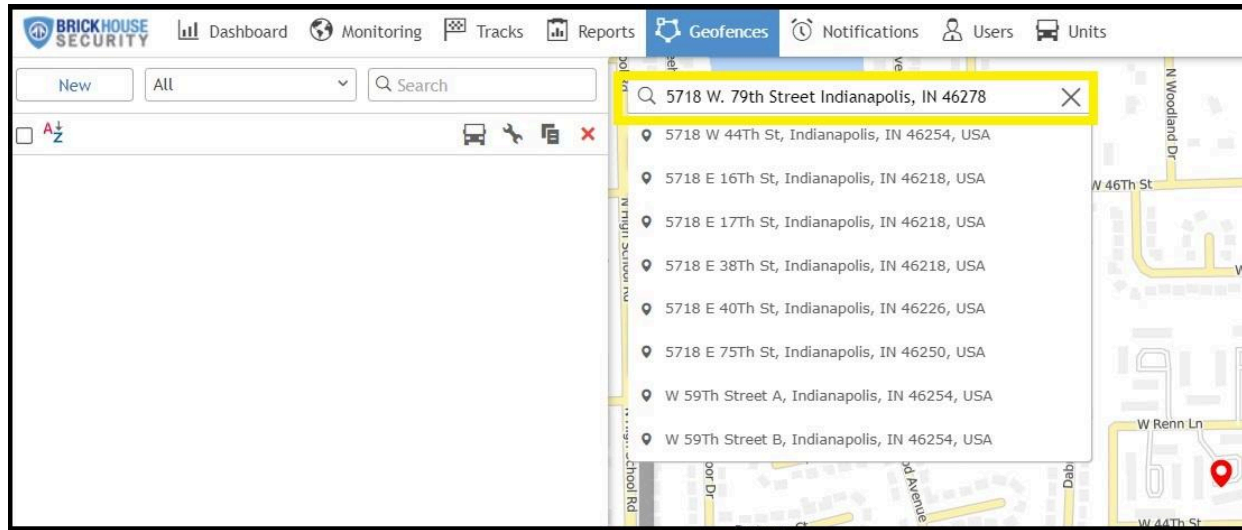

To set up your first geofence, please follow the steps below.

1. Log in to your GPS account on the desktop site and click the "Geofences" Tab.

2. Click the magnifying glass icon and type in an address.

Tip: Zoom into the area on the map where you would like to create the geofence. To get the most accurate results, be sure to center the geofence on the primary location and make it large enough to enclose the surrounding perimeter outside the fixed address.

3. Click on **New** in the menu and give your geofence a clear name and description. It will be helpful when you receive alerts, as you will know which geofence is being triggered and can find the vehicle quickly.

4. After clicking the New button, a help window appears to provide you with instructions for drawing geofences. Choose a geofence type on the left: line, polygon, or circle.
Map a geofence. Here are the basic rules for mapping a geofence:

Line:

Polygon:

When finished, press Save. In case of a mistake, press Clear and try again. To close the create mode without saving results, press Cancel.

It is **IMPORTANT** that you create a notification for the newly created geofence for you to receive alerts.

Creating a new Geofence Notification

In the BrickHouse Locate GPS platform, you can receive notifications for any unit activity or change in the device's state. It can be speeding, a change of location, sensor values, or other events. A notification can be delivered by email or SMS, shown online in a popup window, etc. This tutorial is for creating a new Geofence Notification.

1. Go to the Notifications tab and select New.

2. Select the device by ticking the box, then click **Next**.

3. Choose **Geofence** and click **Next**.

The screenshot shows a 'New Notification' dialog box with a blue header and a close button (X) in the top right corner. Below the header, the text 'Choose trigger type:' is displayed. A list of radio button options is arranged in two columns. The 'Geofence' option in the second column is selected and highlighted with a yellow box. At the bottom of the dialog, there are three buttons: 'Cancel', 'Back', and 'Next'. The 'Next' button is also highlighted with a yellow box.

Choose trigger type:	
<input type="radio"/> Speed	<input checked="" type="radio"/> Geofence
<input type="radio"/> Alarm (SOS)	<input type="radio"/> Digital input
<input type="radio"/> Parameter in a message	<input type="radio"/> Sensor value
<input type="radio"/> Connection loss	<input type="radio"/> Idling
<input type="radio"/> SMS	<input type="radio"/> Interposition of units
<input type="radio"/> Address	<input type="radio"/> Excess of messages
<input type="radio"/> Fuel filling	<input type="radio"/> Fuel theft
<input type="radio"/> Maintenance	

Buttons: Cancel, Back, Next

4. Select when the notification should be triggered:

- When the unit enters the geofence (Inside geofence);
- When the unit leaves the geofence (Outside geofence).

Select the resource whose geofences should be displayed in the list (select All available to view the geofences of all available resources).

In the left list, select the geofences or groups of geofences (displayed in square brackets) for which the notification should be triggered. You can use the dynamic filter above the list to search.

Using the icon >> , move the items from the left list to the right one.

5. Select Notification Actions

Notify by email - When this action is selected, you can add email addresses to which the notification should be sent. To do this, check the box to the right of the field and specify an address.

After specifying the address, a new field is added automatically. To cancel sending the notification to any added address, uncheck the box to the left of it.

Notify by email

Attach image from triggered message

user1@company.com

user2@company.com

user3@company.com

Notify by SMS - This action is used to set up SMS notifications. Type one or more telephone numbers in the international format, for example, +375293293294.

When all fields for entering phone numbers are filled in, additional slots appear automatically.

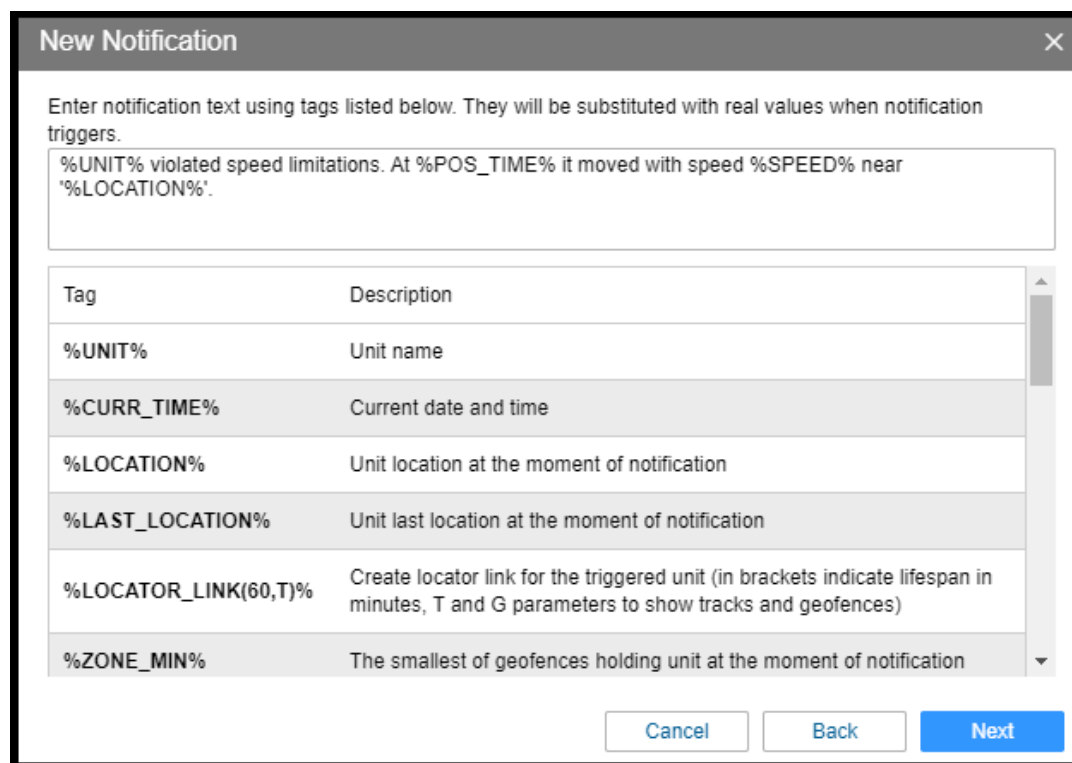

Notify by SMS

+85292223311

[Empty field]

6. Customize the format of the message you would like to receive and click on **Next**.

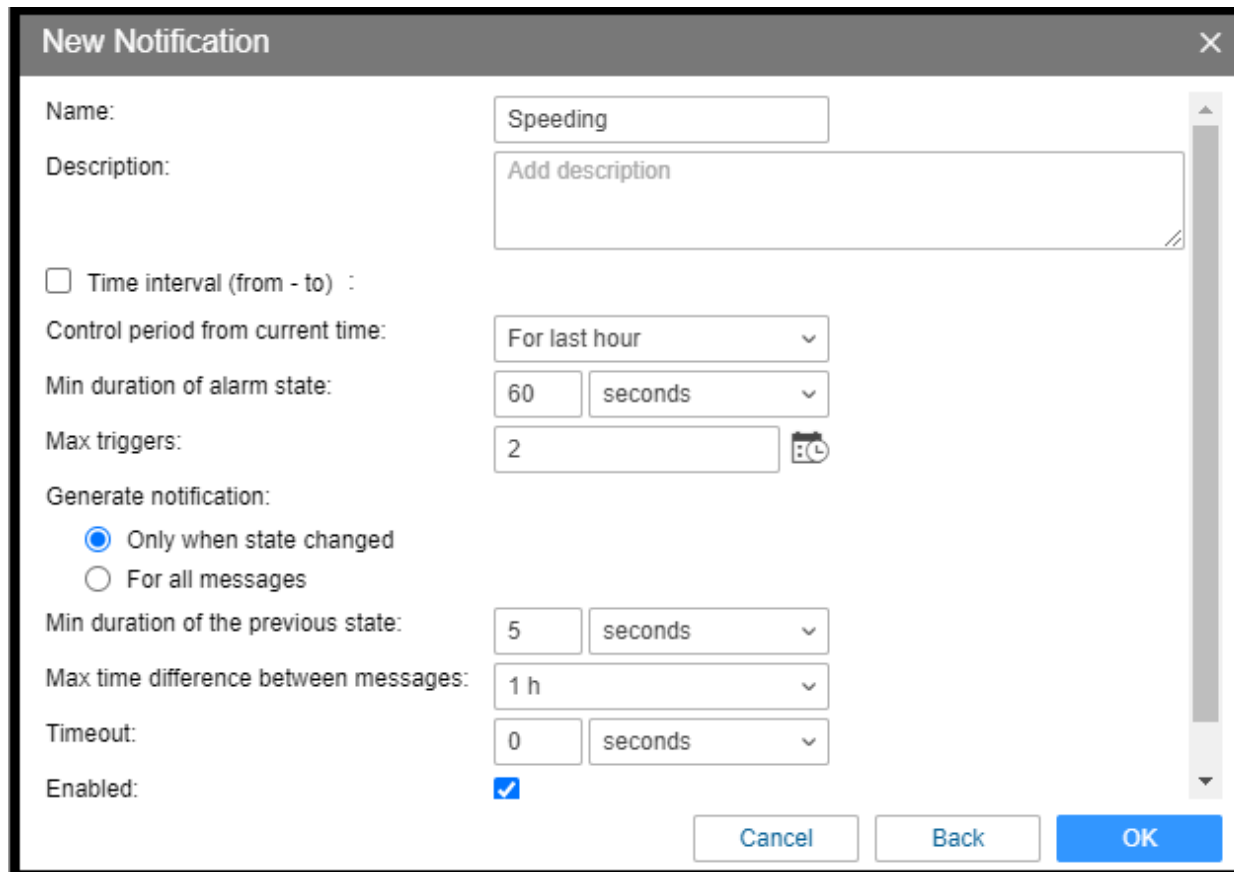

New Notification [Close]

Enter notification text using tags listed below. They will be substituted with real values when notification triggers.

`%UNIT% violated speed limitations. At %POS_TIME% it moved with speed %SPEED% near '%LOCATION%'.`

Tag	Description
<code>%UNIT%</code>	Unit name
<code>%CURR_TIME%</code>	Current date and time
<code>%LOCATION%</code>	Unit location at the moment of notification
<code>%LAST_LOCATION%</code>	Unit last location at the moment of notification
<code>%LOCATOR_LINK(60,T)%</code>	Create locator link for the triggered unit (in brackets indicate lifespan in minutes, T and G parameters to show tracks and geofences)
<code>%ZONE_MIN%</code>	The smallest of geofences holding unit at the moment of notification

7. At the last stage of creating a notification, specify the parameters for its triggering and click OK. The created notification appears in the list in the left part of the window.

The image shows a 'New Notification' dialog box with the following fields and options:

- Name:** Speeding
- Description:** Add description
- Time interval (from - to) :
- Control period from current time:** For last hour
- Min duration of alarm state:** 60 seconds
- Max triggers:** 2
- Generate notification:**
 - Only when state changed
 - For all messages
- Min duration of the previous state:** 5 seconds
- Max time difference between messages:** 1 h
- Timeout:** 0 seconds
- Enabled:**

Buttons: Cancel, Back, OK

Getting to Know the BrickHouse Locate GPS Mobile App

The BrickHouse Locate GPS mobile app is available on the Google Play and iOS App Store and can provide you with the same advanced tracking functionality as the web-based GPS platform. The app can be used on any smartphone or device that runs on Android or iOS.

Some of the features included in the app are:

- Tracking of current device location as well as historical data, including all trips and stops
- Ability to run and externally share Reports that are available on the web platform
- Ability to receive and manage notifications

The next pages will include screenshots and descriptions of the app features and settings.

Download the BrickHouse Locate GPS mobile application from your iOS App Store or Google Play store.

Please have your login credentials ready to access the platform through the mobile application. You should have received your login information via email when your device was activated.

Login Screen

Enter the same username and password you use on the web platform to log in to the mobile app.

If authorized, iPhone (iPhone) will obtain full access to your account.

Unit Selection

Once logged in, you will see the list of units active on the account under the Monitoring tab.

Adding items to the list

1. Select the Units or Groups tab.
2. Tap the icon  located to the right of the search and tap Select items.
3. Select the required units or unit groups. You can use the search or the Select All button to the right of it. In addition, you can use the Select All button to select all the items filtered by the search.
4. Save the changes.

The Monitoring tab gives access to the main tracking features.

- Choose the unit and watch the movement on the map.
- Send commands.
- Monitor the raw data received from the device, etc.
- Tap a device to view the current tracking information and history.

Scroll downwards to view in full size. Scroll upwards to view the tracker information.

The **General information** section consists of tabs with unit properties.

To select the tabs you want displayed in the section, click **Configure tab view** at the end of the list and enable or disable the required tabs using the switch.

The indicated settings are applied to all the units at the same time.

Map View

The map can be viewed by tapping the map icon at the menu located at the bottom of the page. All units selected on the monitoring tab will be displayed on the map. The default view will center on your trackers and zoom out to a level that shows all of your units.

Interacting with Map

To quickly find a specific unit, type its name in the search bar.

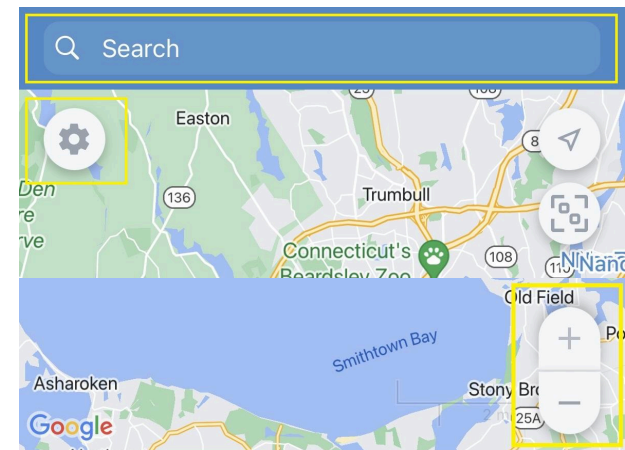

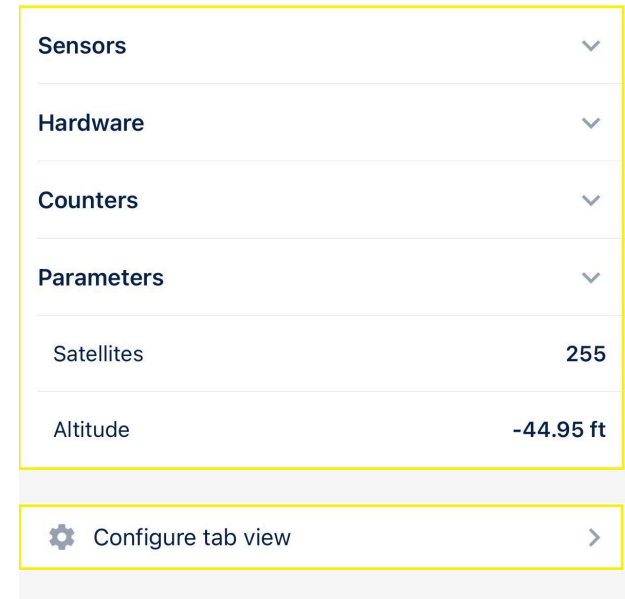

To change any map settings (map layers, unit captions, and so on), tap the icon  in the upper-left corner.

Zooming

Use +/- to zoom in and out or use the following screen gestures:

- Double tap - zoom in.
- Two fingers tap - zoom out.
- Two fingers stretch/pinch - zoom in and zoom out, correspondingly.
- Double tap without releasing on the second tap, and then slide the finger down to zoom in or up to zoom out.

These controls can be enabled or disabled in the 'Map Settings' mode from the main Settings.

Tilt Gestures

You can tilt the map by placing two fingers on it and moving them up (increasing tilt angle) or down (decreasing tilt angle).

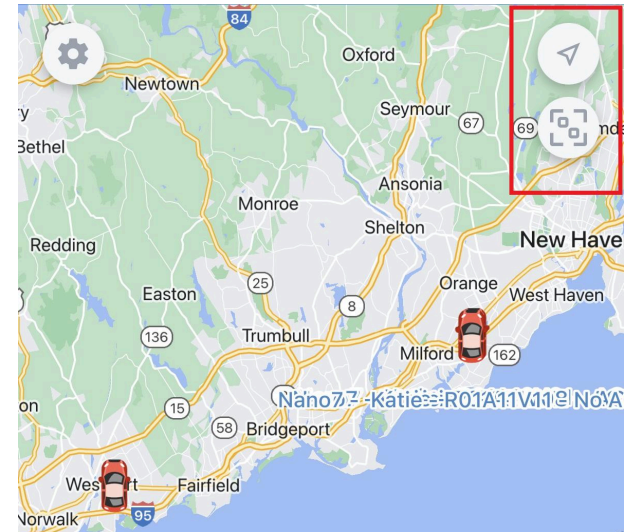

Map Rotation

To rotate the map, place two fingers and apply a rotation motion. After the map has been rotated, a compass icon appears in the top right corner. Tap it to return the map to the default position.

Finding your own location

To find your own location on the map, tap the icon . As a result, the map focuses on the location of your mobile device, and the icon turns blue. When you move around the map and lose the location marker, the icon  changes to  tapping which centers the map on the location of the mobile device.

To return to the device's current location, tap the  icon.

Tracking your Device (Historical Data)

History tab

The History tab shows the past tracking location of the unit. By default, the data is displayed for the current day.

Selecting a date will display the historic tracking data for that day.

The top row shows summary info.

- trip duration (🚗)
- track length in trips (📈)
- parking duration (P)

Clicking on the time of the day will move the map to show the position where the unit was.

	P	🕒 19h 46min	Avalon Dr, Milford, CT 06460, USA	
11:19AM	🚗	🕒 7min	📈 1.87mi	📏 max 36mph
11:26AM	P	🕒 34min	858 Boston Post Rd, Milford, CT 06460, USA	

The top panel displays the menu in the upper right corner which opens when you click on the menu button.

- Send command will send requests to your unit.
 - Ping will help locate the unit easily
 - Reboot will turn the unit off and on again
- Share location lets you provide a link that enables others to track your unit.
- Navigation apps will let you plan a route using another navigation app like Google Maps.
- Copy coordinates allow copying of the latitude and longitude of the unit to the clipboard so you can paste and search on mapping platforms.
- Run reports for the tracker you are currently viewing. See the Reports section of the guide for more details.
- Edit allows changing the name and icon of the unit.

- ▶ Send command
- 📍 Share location
- 🗺️ Navigation apps
- 🕒 Copy coordinates
- 📊 Execute report
- ✎ Edit

Report Execution

To execute a report, follow the steps described below.

1. Select a report template.
 - Geofence
 - Location History
 - Trips and Parkings
2. Select a unit/unit group (depending on the selected template, the list shows all the available objects).
3. Specify the time interval. You can set it using the 'quick interval' (tap the icon *******) or manually. To specify the interval manually, tap the start and end lines, and select the required dates and times. If you select the Week or Month quick interval, the report runs for the last full week or the last full month.
4. Select the page orientation of the report.
5. Tap Execute report.

The report is opened as a PDF file. You can open it in another application, send it by email or messenger, and so on (the icon  in the screen's upper-right corner).

The template, object, and page orientation selection is saved until the next time you run the report.

Thank you for choosing BrickHouse Security for your GPS tracking needs. For further support with the Locate GPS platform or anything else, please reach out to us by email, phone, or live chat at BrickHouseSecurity.com.
